Understanding the Consultation Process

Step 1: Proposal	Step 2: Notification	Step 3: Consultation	Step 4: Acknowledgement	Step 5: Response	Step 6: Feedback	Step 7: Approval
Bell proposes a site in accordance with Innovation, Science & Economic Development Canada's (ISED) Default Consultation Process with the Township of St. Joseph.	Packages are mailed to property owners within 122m of the property boundary of a proposed antenna tower. A newspaper notice is placed in the Island Clippings inviting residents to the consultation process. ISED is notified.	Residents are invited to comment within 30 days.	Bell must acknowledge receipt of comments within 14 days.	All reasonable and relevant concerns will be addressed by Bell within 60 days.	Residents have a further 21 days to respond to Bell.	A summary of consultation is shared with ISED and the Township of St. Joseph. A request is submitted to the Township of St. Joseph for concurrence.

What is an antenna tower?

An antenna tower supports the low power short-range radio systems that allow us to enjoy our mobile devices, such as our smart phones and tablets.

The purpose of the tower is to provide dependable advanced telecommunication service to the surrounding businesses and residences.

Why now?

Canadians are using wireless devices more and more in their daily lives. Currently, more than half of all phone connections in Canada are now wireless, including 70 percent of all 911 calls.

Canadian Radio-television and Telecommunications Commission (2013) <http://www.crtc.gc.ca/eng/publications/reports/rp130705.htm>

In order to provide the high quality of service that Canadians have come to expect, Bell must enhance its networks to meet this increased demand.

By adding new antenna sites, Bell customers will continue to benefit from dependable, high speed and high quality wireless service.

Is it safe?

The consensus among Canadian health organizations and the scientific community is that wireless antennas are safe and in fact, this antenna tower will operate well below the levels established by Health Canada under Safety Code 6.

Bell is committed to the health and safety of Canadian communities. That is why we take great pride in our compliance with all current health and safety guidelines while continuing to provide Canada's first-rate wireless coverage.

"Health Canada, along with independent experts from across the country, continually monitor the scientific literature to ensure that Safety Code 6 is based on the best available evidence and has significant margins of safety for the Canadian population."

Dr. Patricia Daly, MD, FRCPC, Chief Medical Health Officer & Vice President Public Health.

What is Safety Code 6?

The purpose of this code is to establish safety limits for human exposure to radiofrequency (RF) energy in the frequency range from 3 kHz to 300 GHz. The safety limits in this code apply to all individuals working at, visiting, or living at or near federally regulated sites.

Bell attests that the proposed antenna tower will be installed and operated so as to always comply with Safety Code 6.

Why here?

The quality of service in Richards Landing does not currently meet Bell standards and the needs of people in this area.

For example, the ability to use data services such as texting, emailing, streaming or surfing is either extremely slow or not possible at times. Some areas cannot obtain a signal inside a dwelling.

Bell is proposing to install a new antenna tower on the property municipally known as 1669 Arthur Street, Richards Landing.

The proposed location is in the southeast corner of the property, a minimum of 31m east of the solar panel.

There are no existing towers in the area that Bell can co-locate on.

Is it environmentally friendly?

As Canada's largest communications company, we care about the protection and preservation of our environment. Bell is proud to be included in the Corporate Knights 2014 Global 100 Most Sustainable Corporations in the World. This index is an annual ranking of corporate sustainability performance and recognizes the top performers in each industry.

The proposed antenna will be built in accordance with the highest professional engineering standards and practices. We ensure the utmost care and respect for the environment as we comply with the Canadian Environment Assessment Act.

What will it look like?

- Bell is proposing a 30m mono-pole
- Tower lighting is not required per Transport Canada's recent aeronautical assessment.
- A 1.8m x 2.4m shelter will be placed at the base of the tower
- The site will be fully fenced with a locked access gate
